

III. REMARKS

1. Claims 1-14 remain in the application. Claim 4 has been amended to overcome the 35 USC 112. second paragraph rejection.

The amendments to the claims are not limiting, are not made for reasons related to patentability, and do not raise issues of estoppel.

2. In the present Office Action Summary dated 30 June 2006, the Examiner indicates in Box 12c that none of the certified copies of the priority documents have been received.

Applicants mailed a certified copy of the European foreign priority Application No. 03250217.1 to the USPTO on 13 January 2004.

Attached to this response is:

A copy of the Express Mail Certificate of Mailing dated January 13, 2004 listing the Certified Copy of the Priority Document;

A copy of the Transmittal of Certified Copy; and

A copy of the first page of the priority application mailed on 13 January 2004.

Therefore, Applicants respectfully submit that a certified copy of the European foreign priority Application No. 03250217.1 was in fact submitted and received by the USPTO.

Applicants request an acknowledgement that the priority document was received.

3. Applicants appreciate the indication that claims 7, 9, 11 and 14 would be allowable if rewritten in independent form including all the limitations of the base claim and any intervening claims. However, Applicants believe that these claims are patentable as they stand for the reasons stated below.

4. Applicants respectfully submit that claims 1-6, 8, 10, 12, and 13 are not anticipated by the prior art disclosed in Figure 2 of the present application under 35 USC 102(a).

Figure 2 fails to disclose or suggest injecting a pilot tone into a reference input of a digital to analog converter as recited by claim 1, or a pilot tone source arranged to inject a pilot tone into a reference input of a digital to analog converter as recited by claim 8.

As correctly pointed out by the Examiner in the present action, "the pilot tone is injected or added by the addition circuit (19)." Page 3, lines 9-22 describe the connections and operations of the components of Figure 2 and clearly state that the pilot tone is generated by generator 16, fed to amplitude control unit 18, and fed into summation node 19 to be added to the output of D/A 12.

Thus, the pilot tone is added to the output signal of D/A 12 in Figure 2. In contrast, the claims are directed to injecting the pilot tone into the reference input of the D/A.

At least for these reasons, Applicants submit that Figure 2 does not anticipate independent claims 1 and 8 and dependent claims 2-6, 10, 12, and 13.

For all of the foregoing reasons, it is respectfully submitted that all of the claims now present in the application are clearly novel and patentable over the prior art of record, and are in proper form for allowance. Accordingly, favorable reconsideration and allowance is respectfully requested. Should any unresolved issues remain, the Examiner is invited to call Applicants' attorney at the telephone number indicated below.

The Commissioner is hereby authorized to charge payment for any fees associated with this communication or credit any over payment to Deposit Account No. 16-1350.

Respectfully submitted,

Joseph V. Gamberdell, Jr.
